ORGANIZATIONAL & PERSONNEL STRUCTURE

Aries works closely with our clients throughout the entire construction process, offering a comprehensive approach to each and every project. A member of our senior management team is involved in each project and an Aries representative is directly accountable for all aspects of the project from design, scheduling, and project management to quality control. We have found that this process allows us to manage our prefabricated building projects effectively and enables us to develop lasting relationships with our clients.

As a nationwide provider of space solutions, we are adapted to having multiple projects of vast levels of intricacy, active simultaneously year-round with multiple fluctuations by season. Aries advantage to successfully completing these projects accurately on time and within budget, is accomplished with our key personnel internally and externally reaching from coast to coast. With over 1 million SF of production capacity through our manufacturing partners, we strategically coordinate and select the correct team for each project using proven partners who are the elite in the industry. The top producers of prefabricated structures delivered and completed by the strengths of both local and experience subcontractors, ensures a successful project for your clients.

The organization of the key personnel that will be specifically dedicated to this project is as follows:

Michael Bollero, Jr., President

Michael Bollero, Jr. is the President of Aries Building Systems. Michael joined Aries Building Systems in 2013 and is responsible for all functions of the business. Prior to joining Aries, Michael held management positions with multiple companies within the modular building and leasing industry. Over the course of his 20+ year career in the modular building industry, he has served on multiple modular building industry committees and played key roles in countless projects that have garnered industry acclaim. His dynamic leadership style is a driving force behind Aries Building Systems' continuous pursuit for setting the new standard for excellence in the industry. Michael is responsible for overseeing all aspects of the Aries powerhouse and is involved in all phases of projects.

Jay Scott, Construction Manager

Jay is directly responsible for all major projects and daily operations. Established Senior HSE and Construction Management Professional with over 15 years of Project Management, Design, and Business Operations expertise. Results-driven leader achiever with on-site Safety and Field supervision experience. Solid ability to rapidly assimilate new technologies and concepts to meet the demands of dynamic environments and customer satisfaction. Jay is responsible for overseeing the entire project construction process, for all projects, from beginning to end. Jay will ensure that the Aries construction and project team meets the deadlines specified and that all aspects of the project are completed accurately, within budget, and on time.

Danny Harling, Project Designer

Danny is a project designer for Aries Building Systems, a leading provider of modular buildings, workforce housing solutions and construction services. Danny's duties include design engineering of modular buildings and supporting our production and install teams. Danny has extensive Construction Document production and Administration experience. Danny's responsibilities are to initiate and create the project design/plans for both Aries and the client as well as to develop solutions for any required architectural complexities.

Joshua Acevedo, Estimator

Joshua is the Estimator for Aries Building Systems, with a background in Construction and Construction Engineering. Prior to Aries, Joshua was with Quanta Services where he specialized in permit design and application submittal for the East Region new and old construction telecommunications jobs. Joshua is bilingual, allowing him to work with persons from diverse backgrounds and completed his studies at Lonestar College. Joshua is responsible for preparing and estimating budget costs for all projects, by studying the plans and specifications required, as well as resolving cost differences by analyzing information provided and collecting further information to benefit the project's success.
